

ROOFLIGHTS

MANUFACTURED TO THE HIGHEST STANDARDS
OUR RANGE OF ROOFLIGHTS COMBINE
EXCELLENT THERMAL EFFICIENCY WITH A
SLEEK AND SLENDER AESTHETIC LOOK.

Offered in configurations of fixed flat rooflights, (electrically) opening and access rooflights, walk-on rooflights/floorlights, pitched and pyramid rooflights and an ultraslim aluminium roof system.

All of our rooflights can be supplied with various glazing options including high performance solar control, tinted or even obscured glass and are available in either single or multi pane units, surpassing any required building regulations.

ROOFLIGHTS

Made for pitched or flat roof applications, there is even a lean to wall abutting detail, providing the same fantastic finish with the slimmest of slight lines. Optional extras include key fob remote control, heated rain sensors and a weather pack which ensures the roof closes in the event of high winds.

Our walk-on range bring light into spaces such as subterranean basements or decking areas, into ceilings where a raised roof light is not permitted and internally into floors illuminating the room below.

Our pyramids are supremely manufactured using a twin poly-amide thermal break, then factory resin bonded with 24mm double glazed units using soft coat low E glass and Argon gas filled cavities.

Our Ultraslim Aluminium Roof Range is similar to more traditional roof lights but the rafters are reduced by 30% and the ridge by 70%, together offering a far more elegant and contemporary roof light whilst increasing both structural strength and light transmission.

- **Superior quality, far surpassing building regulations.**
- **Available as single or multi pane units.**
- **Lean to wall abutting detail available for the slimmest of slight lines.**
- **Solar control, tinted, or obscured glazing options.**
- **Anti-slip surface treatment for walk-on rooflights.**
- **Ultraslim aluminium roof available in any RAL colour and timber foil effect option.**
